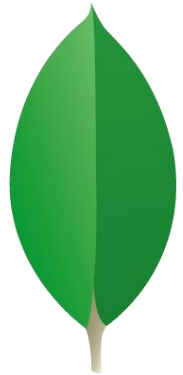
Single Purpose Aggregation Operations



mongoDB

Single Purpose Aggregation Operations

Digitorious

MongoDB provides a number of aggregation operations that perform specific aggregation operations on a set of data.

Aggregation Operations

Count()

Distinct()

Group()

Aggregation Operations

Digitorious

Count() : return a count of the number of documents that match a query.

Distinct() : operation takes a number of documents that match a query and returns all of the unique values for a field in the matching documents.

Group() : operation takes a number of documents that match a query, and then collects groups of documents based on the value of a field or fields.
